1 Introduction

- 1.1 This document defines the **Approved** procedure for work in ancillary cubicles, such as Protection Panels, Cooler Control Panels, Tele-control panels, located in Substations and Switching stations.
- 1.2 Compliance with the following procedure **Shall** enable staff to work safely and reduce the risk of injury to themselves and their colleagues.

2 Scope

- 2.1 The scope of this document **Shall** be limited to persons who hold the appropriate competence and authorisation to access Substations and Switching stations for work in ancillary cubicles.
- 2.2 The procedures included herein have been developed to minimise incidents associated with human error by ensuring that:
 - A consistent approach is maintained for the safe access to ancillary equipment cubicles located in Substations and Switching sites
 - At all times consideration is given to the operating characteristics of ancillary equipment and the **Dangers** imposed

Revision: 1.00	Classification: Public Issue Date: March 2023		Review Date	e: March 2028

5 General Responsibilities

- 5.1 Persons who are required to operate and undertake work near the **System Shall** have a thorough understanding of the work and ensure on-site risks are suitably assessed and appropriate control measures put in place before, during and after all activities.
- 5.2 Persons **Shall** ensure that, at all times during the work (or associated testing), **General Safety** arrangements are maintained and that other work areas are not adversely affected by the activities for which they are responsible.

6 Authorisation

- 6.1 It **Shall** be the responsibility of the individual to ensure that any actions performed are within the bounds of their competency and authorisation level.
- 6.2 Competence and authorisation certificates **Shall** be retained personally and be made available upon request.

7 Records

- 7.1 Where notified, the **Control Engineer Shall**, prior to work commencing, record an event log for persons carrying out work on ancillary equipment.
- 7.2 Where notified, The **Control Engineer Shall** record an event log of any ancillary equipment that has been identified with signs of damage or distress. The **Control Engineer Shall** contact the local depot to initiate remedial actions.

8 Personal Protective Equipment

- 8.1 Persons who are required to work near the **System Shall** wear suitable Personal Protective Equipment (PPE) as identified in their risk assessment. Furthermore, where warning labels or signs identify the existence of a particular hazard, additional and appropriate PPE **Shall** be worn.
- 8.2 **SSEN-D** PPE requirements are detailed in WI-NET-OSM-002.

9 General Requirements

- 9.1 All persons who may be concerned with work in ancillary cubicles **Shall** be trained in and be conversant with the treatment of electric shock.
- 9.2 As working environments are subject to change, work in ancillary cubicles containing Live equipment **Shall** be regularly assessed by a **Competent Person** for **Danger** and where necessary the appropriate control measures put in place before, during and after work activities.
- 9.3 Depending on the nature of the work, the appropriate level of Supervision Shall be provided.
- 9.4 In agreed circumstances it may be necessary to issue a **Safety Document** where it is considered other hazards, including confined space working and environmental hazards, may exist.

	Operational Safety Manual - Section 6.11		✓	
Revision: 1.00	Classification: Public Issue Date: March 2023		Review Date	e: March 2028

- 9.5 Work in ancillary cubicles **Shall** be carried out using **Approved** insulated tools and equipment.
- 9.6 Good housekeeping **Shall** be maintained in the work location at all times. The ancillary equipment to be worked on **Shall** be adequately illuminated and if the work is outdoors, the possibility of unduly adverse weather conditions **Shall** be considered.

10 Procedure

10.1 General

Persons who are required to undertake work in ancillary cubicles **Shall** be aware of the **Dangers** that may arise. The main **Dangers** to persons include electric shock, burns and chemical injuries arising from:

- Persons working on wrongly identified equipment
- Electric shock from direct and indirect contact
- Inadvertent and uncontrolled release of stored energy from ancillary equipment
- Inadvertent exposure to the content of batteries

10.2 Access to Ancillary Cubicles

- 10.2.1 Persons accessing cubicles containing ancillary equipment **Shall** carry out a visual inspection to identify signs of damage or distress. Where evidence is found, the following procedure **Shall** be implemented:
 - Apply a warning notice, for example 'Access Restricted Contact the **Control Engineer'**
 - Secure the cubicle with a Safety Lock where reasonably practicable
 - Apply an exclusion zone around the defective equipment if required
 - Inform the Control Engineer of findings and actions taken to secure the area
 - Arrange for remedial action to be taken as soon as practicable
- 10.2.2 Where the visual inspection proves satisfactory, the cubicles containing ancillary equipment **Shall** be accessed accordingly.

10.3 Work in Ancillary Cubicles

- 10.3.1 Work in ancillary cubicles **Shall** be carried out by persons who have received appropriate training.
- 10.3.2 Where work involves modifications or repair to the ancillary cubicle or equipment housed within, any adjacent cubicle(s) Shall be screened where necessary to prevent **Danger** and have an **Approved** notice applied to highlight the circuit state.
- NOTE: The requirements of 10.3.2 excludes the changing of settings on ancillary equipment.
- 10.3.3 The use of screening and **Approved** notices **Shall** be repeated on the rear of ancillary cubicles as required.

PR-NET-OSM-053			Distribution	Transmission
			1	
Revision: 1.00	Classification: Public Issue Date: March 2023		Review Date	e: March 2028

- 10.3.4 The **Control Engineer Shall** be notified before and upon completion of work in ancillary cubicles that involves the testing of protection, auxiliary wiring or other circuits associated with trip/close functions or supervisory equipment.
- 10.3.5 When informing the **Control Engineer** of the work to be carried out, the implications for **System** security **Shall** be discussed including 'risk-of-trip' and the need for any temporary supplies.
- 10.3.6 Where reasonably practicable, **Low Voltage** ancillary supplies **Shall** be **Isolated** or shrouded to prevent accidental contact or **Danger** during work. The isolation **Shall** be the responsibility of the appropriately **Authorised Person** in charge of the work.
- 10.3.7 NOTE: Modern **Low Voltage** ancillary supplies might be inherently shrouded by design, this would not require additional shrouding, however screening could still be beneficial.
